SYLVIA ROTH (Lady Macketh) has played in the Y.M.H.A. production of "One of the Friging Pan", was in plays at College Misericordia and participated in dramanic busing misericordia. This takened young misericordia and the statement was busing the sign statement was busing the sign of the statement how much promise as an up and eccurg versatile actress. Her cooperative spirit and thoughfulness are to be admired. Ap-proaching the role of Lody Macketh with "wenom" in the role like.

RALPH F. HODGSON (Macduff) com-monly known as "Duke" about the campus ably projects his emotions into the role of the tragic Macduff. A native of Pymoath, "Duke" while in high school had the lead in "Duke while in high school had the lead in "Ever Since Eve", participated in the an-nual minstrels and won second prize in the oratorical contest. Duke is no newcomer to dramatics at Bucknell, having last been seen in "The Father" and we look forward to an excellent performance by him.

REESE PELTON (Duncan). Music is the dominant theme in Resecs life. The Lake Winola, Ta. lad directs the college band and orchestra, and in his spare time arranges for the Buckenellians. Included in Resec's many original works is a muscal comedy which is to be produced this sum-mer.

From The Director

From vasty 'heaven' o'er vaster than thy Thameside Globe Look not down askance, dear showman William If thou would deign to send a glance at all our way. Here, without trappings we but seek To share our love of thy great art with others. And if we saw the air o'er much Or mouth our lines or generally desport ourselves As the strangers to the boards most of us are, Forgive!

Somehow in thee we feel a kinder critic . . . For while thou mayest condemn the faults We know are ours in acting's art, Thou also can but know that we have learned To have these much and recognize thy immortality far more, What e'er the finished product may be like, Than those who only know the by the book. For we have learned of thee in body, mind and voice.

Into ourselves, out of ourselves we've taken thy rich lines And here tonight we've tried, at least within our scope, To give the best performance that we could. If aught has pleased we humbly grateful are; And if some heart in pit or gallery here Has quickened at the sight of thee alive again, Gur purpose we have served.

Obediently Yours,

- JAMES A. MCKANE, T-A SQUARE PRINTING COMPANY

WELCOMES P. I. A. A. WRESTLING TOURNAMENT TO WYOMING VALLEY

* * *

I T MARY

WRESTLERS, OFFICIALS and FRIENDS:

It is a pleasure and honor for the Committee Members of District 2, to be host to the Tenth Annual P. I. A, A. Championship Wrestling Meet. We realize that a formal welcome, in and of itself is not significant, but we trust that ours will be found hearty and sincere. We want you to know we greet your friendship with sincerity and hope you will find many more friends at this meet.

Since the introduction of wrestling, the P. I. A. A. has won a wide reputation in the development of this sport, and it is our desire in Wyoming Valley to assist the P. I. A. A., that it may further win acclaim.

The District 2 Committee hope you will leave the Valley with memories of a successful tournament, and that you have a grand time while you are here.

Cordially yours,

RICHARD MENICHOLS, Chairman, FRANK RUTKOWSKI, FRANK DENNIS, JOHN KANYUCK, RICHARD CARVOLTH, Committee.

COUNCIL SCORES AGAIN

Faculty Reporter Faculty Adviser

Proofreaders

Several issues ago we mentioned that the junior college could at last boast of a Student Council and the recent announcement that Charlie Spivak, one of the key-men in the musical world, would bring his orchestra here on May 24. proves the statement. The council handling school government at the present time is definitely for the school and

students. All one has to do to be sure that there is a competent group handling student affairs at Bucknell is to attend one of the Student Council's meetings. Everything about the meetings surgests sound handling. John Reilly, president of the organization, has compute acceled intermediate and the direct of the Bucknell show the sings with the Duleet Teens, local

the organization, has complete control during a meeting, but does not exercise his powers to the point where one feels that he is unreasonably dominating the session. Outsiders are given a chance to take part in the meetings, although such proceedings are not called for the student constitution.

A little praise should be given to Joe Savitz, who is one of the most active members of the council. Joe seems to spe-cialize in arranging for the junior college's dances. He was Canize in arranging for the junior concepts anances. Ine wasp-instrumental in arranging for tonight's affair, which is be-ing sponsored by the Lettermen's Club, and also did most of the work in connection with bring "The Man Who Plays The Sweetest Trumpet in the World" to this college on May 24.

COUNCIL SCORES AGAIN

Several issues ago we mentioned that the junior college could at last boast of a Student Council and the recent announcement that Charlie Spivak, one of the key-men in the musical world, would bring his orchestra here on May 24, proves the statement. The council handling school government at the present time is definitely for the school and

the organization, has complete control during a meeting, but |

does not exercise his powers to the point where one feels that he is unreasonably dominating the session. Outsiders are given a chance to take part in the meetings, although such proceedings are not called for the student constitution.

A little praise should be given to Joe Savitz, who is one A fittle praise should be given to Jue Savitz, who is one of the most active members of the council. Joe seems to spe-cialize in arranging for the junior college's dances. He was instrumental in arranging for the junior conege's dances. He was instrumental in arranging for tonight's affair, which is be-ing sponsored by the Lettermen's Club, and also did most of the work in connection with bring "The Man Who Plays The Sweetest Trumpet in the World" to this college on May 24.

INTROIT AND KYRIE

B

Chorus

REQUIEM actorsam dona eig. Do-mine; et lux perpetua luccat eis. Te decet hymnus Daes in Sion; et ibi reddetur votum in Jerusalem: szawád oratiozem meam; ad te omnis caro veniet. Requiem.

KYRIE eleison. Christe eleison. Kyrie eleison.

None-See

DIES irae, dies illa, Solvet saeclum in favilla, Teste David cum Sybilla.

Quantus tremor est futurus. Quando judex est venturus. Cuncta stricte discussurus.

Tuba mirum spargens sonum Per sepulchra regionum, Coget omnes ante thronum.

Mors stupebit et natura, Cum resurget creatura, Judicanti responsura.

Liber scriptus proferetur. In quototum continetur, Unde mundus judicetur.

Judex ergo cum sedebit, Quidquid latet apparebit, Nil inultum remamebit.

Dies irae, dies illa, Solvet saeclum in favilla, Teste David cum Sibylla.

ETERNAL rest give to them, O LOBD and let perpetual light shime upon them. A hymm, O God, becometh Thee is Sice; and a row shall be paid to Thee is Jerusalem, O Lord, hear my prayer; all flesh shall come to Thee. Eternal rest give to them, etc.

Soli and Chorus

LORD, have mercy upon us. Christ, have mercy upon us. Lord, have mercy upon us. DIES TRAF

Chorus

DREADED day, that day of ire, When the world shall melt in fire, Told by Sibyl and David's lyre.

Fright men's bearts shall rudely shift, As the Judge through gleaming rift Comes each soul to closely sift.

Bass and Chorus

Then the trumpet's shrill refrain, Piercing tombs by hill and plain, Souls to judgment shall arraign. Death and nature stand aghast, As the bodies rising fast, Nie to bear the seatence passed.

and Chorus

Then before Him shall be placed, That where on the verdict's based, Book wherein each deed is traced.

When the Judge His seat shall gain, All that's bidden shall be plain, Nothing shall unjudged remain.

Dreaded day, that day of ire, When the world shall melt in fire, Told by Sibyl and David's lyre.

Soprano, Mezzo-Soprano, Temor, and Chorus

Wretched man, what can 1 plead? Whom to ask to intercede. When the just much mercy need?

0-

Thou, O awe-inspiring Lord, Saving e'en when unimplored, Save me, mercy's fount adored.

Recordare Jesu pie, Quod sum causa tuae vise; Ne me perdas illa dic. Comercas me desisti lassus, Redemisti crucem passus, Tagtus labor non sit cassus.

Tenor

Base

Juste juder altionis, Domen fac remissionis, Ante diem rationis.

Quid sum miser tunc dicturus? Quem patronum rogaturus, Cum vix justus ait securus?

Res tremendae majestatis, Osi salvandos salvas gratis, Salva me, fons pietatis.

Ingemisco tanquam reus, Culpa rubet vultus meus; Supplicanti parce, Deus.

Qui Mariam absolvisti, Et latronem exaudisti, Hibi quoque spem dedisti.

Preces meae non sunt dignae, Sed tu, bonus, fac benigne, Ne perenni cremer igne. Statuess in parte dextra.

Confutatis maledictis, Flaumis acribus addictis; Voca me cum benedictis.

Oro supplex, et acclinis, Cor contritum quasi cinis; Gere curam mei finis.

Soprano, Mezzo-Soprano Ab: sweet Jesus, mindful be, That Thes can'st on earth for me; Cast me not this day from Thee.

Seeking me Thy strength was spent Ransoning Thy limbs were rent; Is this toil to so intest?

Thou, awarding pairs condigs, Hercy's ear to me incline, Ere the reckosing Thou assign.

felos-like, my lot bewail, Suffused cheeks my shame unveil; God! O let my prayer prevail.

Mary's soul Then madest white, Didst to beaven the thief invite; Hope in me these now excite. Prayers of mine in vain ascend; Thom art good and wilt forefend, In quenchless fire my life to end.

Call me then to join the blest.

Place amid Thy sheep accord, Keep me from the taisted horde, Sot me is Thy sight, O Lord.

Prostrate, suppliant, now no more, Unrepesting as of yore, Save me, dying I implore.

Soli and Chorus Hoursful day, that day of sighs, When from dust shall man arise, Staized with guilt his doom to know.

B

Lacrymosa dies illa, Qua resurget ex favilla, Judicandus homo reus. Huic ergo parce Deus, Pie Jesu Domise, Dona eis requiem. Amen.

INTERMISSION

O LORD JESUS CHRIST, the King of plorg, deliver the souls of all the faithful departed from the pains of hell and from the deep pit; deliver them from the lica's mouth, that hell erguid them sot, that they fall lito the darkness; but let Mring them hely standard by the the factor of promise of old to Abraham and his seed. DOMINE Jesu Christe, Bez gloriae, libera animas omsim fidelim de-functorum de possis infersi, et de profusdo lacu; libera cas de orce leonis, se absorbet cas listrarum, ne cadant in obscorrum, and signa manctum Nichal com colim. Mornhae largem partiae; et semisi ejus.

Ve offer Thee sacrifices and prayers of praise, 0 Lord; do Thou accept them for those souls of which we this day make commemoration; cause them, 0 Lord; to pass from detail to the life which of old Thou Addat promise to Abraham and his seed. Hostias et preces tibi, Domise, laudis offerimus; tu suscipe pro azimabas illis, quarum hodie menoriam facimus; fac eas, Domise, de morte transire ad vitart Qaam olim Abrahae promisisti, et semisi ejus.

Mercy, Lord, on him bestow, Jesus, kind: Thy souls release, Lead them thence to realms of peace. Amen.

SANCTUS

Fugue for Double Chorus

0

When Thou shalt come to judge the world by fire. Eternal rest grant unto them, O Lord; and let perpetual light shine upon them.

Deliver me, O lord, from evering the death on that dreadful day when the heavens and the earth shall be moved, and Thou shalt come to judge the world by fire.

Deliver me, O Lord, from eternal death on that dreadful day. Deliver me, deliver me.

THE COMPOSER

B

Giuseppe Verdi was the brightest star to rise in the firmament of mineteenth centery Italian music. That star rose in 1813, the same year its rival appeared in Germany in the same of Richard Wagner.

When at the turn of the Century the southers star west out, the heart of Italy for a moment, stood still. It lost, and knew it lost a great artist and a great countryman. We had lived a life of the high-est integrity, had rises from abject poterty to give the sous of Italy, through his gift of song, as much to be proved of as any statesman could boast.

Verdi's closing years were speat at St. Agatha, bis large estate near Busetto. It was for him a velcome retreat from the strains and istrigues of the musical World. Hore be ruled with a firm hand. His seighbors regarded bim as an authority os agricultural methods and often songht bis advice on them.

The hardy, passant-bors matter could have rested on his carlier hards, have in the characteristic type in the hat for part of his life, he gave the world his two prestent materpicces: Other detPasts/f both hards on Shatespeare, his favorite dramatint. Falsan/fwas his cally work in the lighter weis, reflecting mamessure the mellowphilosophy which he himself finally stated.

Is close the "double terminal closes his strains and fraction time prisingly wealthy. Not of his forture be used to establish the term the Cana di Repose, a bone for aged musiclass which is still in opera-tion. The royalties from his operas are its main source of income even today.

THE MUSIC

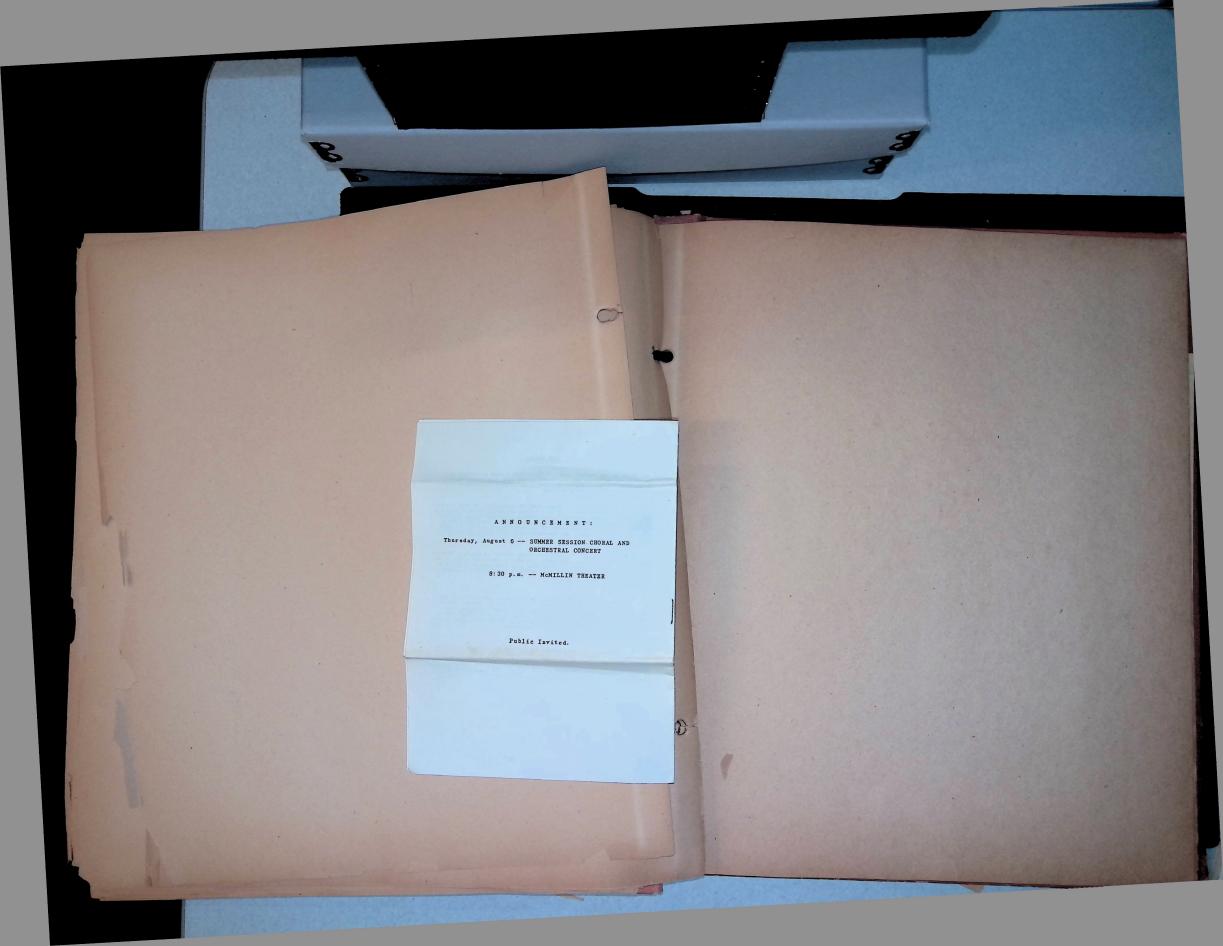

It is to the immesse credit of Verdi that a work so charged with personal and relifious enotion should at the same time reveal musical workmassify of such a big order, one to which even his severest crit-ics may well pay unstituing tribute.

Is musical treatment it ranges from the most taive, as well as mag-sificestly souring molodies for solo roices, to choral sections that are a brilliant as they are massive and complex. The solo lines (combined is spealing vaps) are skilfally-tronght passages of the string beauty. There are solo roices' id's so to speak, co the torrent of sound wredt's arigue style.

The opening chorus, intoning the solema Infroif of the Mass (Bequiem enformal is esriched by accompanying orchestral lines that rereal Verdi at his lyric best. Later, is the Libera, when this passage is given to voices alose. Verdi achieves the most roving and architectoric stroke is the entire vork.

The double fague which follows the Offertorio, the brilliant and virant Sametus, is a four de force. Iny experienced composer will at-test to the tax, but us well-knit fague is in intelf something of a match awy that they are sear to of the force of the search of the search of the Sametus, be gives an arcething to be remembered.

The fibers (originally pessed for the Require is honor of Rossini) about contains a tage, less involved but hardly less impressive. Al-though coupled of the state of the state of the state of the state the Dead, it already contained the honor idea of the state of the state Stateding poor complete work, the receptulation of this theme becomes a storek of real genus. The development of the bus Iree is the sullime achievement of the entire Mass.

B

The cloud-capp'd towers, the gorgeous palaces, The solean texples, the great globe itself, Yes, all which it imberit, shall dissolve, And, like this insubstantial pageast faded, Leave sot a rack behind. We are such stuff As our drama are made on and our little life Is rounded with a aleep.

 Over Hill, Over Dale (Midsummer Nights' Dream Act II, Sc. 1)

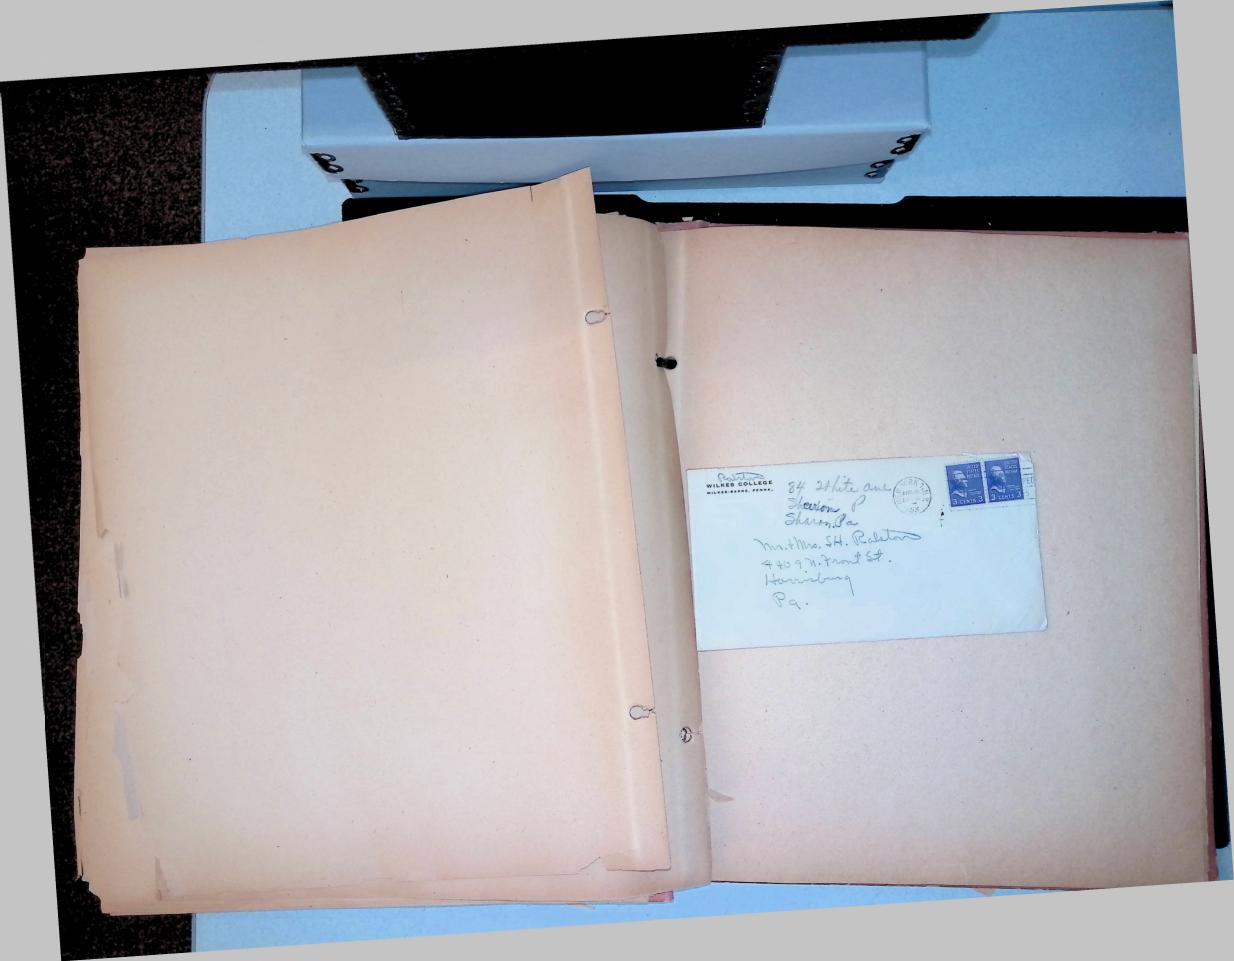

Over hill, over dale, Thorough bunh, thorough brier, Over park, over pale, Thorough flood, thorough fire; I do wander everywhere, Swifter than the moones sphere; And I serve the Fairy Queen, To dew her orbs upon the green. The cowalips tall her pessioners he; In their gold coats spots you see. Those be robles, fairy favours; In those freckles live their savours. I must go seek some dewdrops here, And hang a pearl in every cowalip's ear.

Festival Song of Praise

Felix Mendelssohn

Originally for male voices, this summer was adapted for mixed oborus with orchestral accompaniment by Frofessors Erbest Harris and Harry Wilson.

BACCALAUREATE ADDRESS

SOMETHING OF VALUE GEORGE F. RALSTON. M.A. DEAN OF MEN WILKES COLLEGE

ON THE COVER . . . Dr. Charles Coale Price, Blanchard Professor of Chemistry, Univer-sity of Pennsylvania, receives the Honorary Degree of Doctor of Humane Letters from Dr. Eugene S. Farley, President of Wilkes College. Left to right: Dr. Alfreid Bastress, Chemistry Department Chairman; Dr. Daniel Detwiler, Chairman of the Division of Natural Sciences; Dr. Price and Dr. Farley.

Each year at occasions such as this, the air is rife with advice. If you are familiar with Pickwick Papers, you will recall that Sam Weller, on being addressed by a stranger as, "my friend," was at once highly suspicious. "You are one of the adwice gratis order," Weller thought to himself. or you wouldn't be so fond of me all of a sudden." This "advice gratis," this horitatory counsel of elders, is much in vogue at commencement season. For generations ad-monition and warning have poured forth upon classes momentarily helpless to protest.

But none of this today. I'll not make you the victims of a trigger-happy conscience. We shall not lament the andition of the cosmos, for a life of virtue is one of stratcondition of the cosmos, for a life of virtue is one of strat-egy, not of jitters. Excessive pretense of world reform is a symbol of despan, not al hope. In solving world problems your efforts are really infinitesimal, and if the world is saved or lost, it cannot thank you above a whisper. If someane tells you the times are evil and all is lost, just recall the innumerable times of the past when all was lost, but everybody survived. No, phobophobia is not befitting your years. There are too many concrete things that need looking after for you to surrender to fear of fear. I give you a poem as a reminder of the lamentations of some elders; a point as a tenunder of the tamentations of some etders; you may call it dogered, but it is no more so, in fact, than the cackling of pessimistic orators.

My grandfather, viewing earth's worn cogs Said things were going to the dogs. His grand-dad, in his house of logs Said things were going to the dogs. And his groud dad, in the Flemish bogs, Said things were going to the dogs. There's one ining new I want to state: "The "dogs" have had a good long wait.

ind so they have! We know this to be so, and the mar-Ind is they have? We know this to be so, and the mar-velous world God gave us will abide if we but rise to our coll immainly be valuing, prasing, and anoring that which is the helbest we know and freely offering up to it the best that we have a fin the Pauline words: "Whatever we may have to avoid though now is less than nothing compared with the maniferent future God has planned for us. The whole creation is on tip-toe to see the wooderful webs of the core creation is on tip-toe to see the wonderful sight of the sons of God coming into their own."

Let us then, gather our wits, put our minds, our lives, and what our fathers called our sacred honor to the pledge - and see that we too in our time do something

What is it that will merit our remembrance? Will it be or culture? Perhaps. But what do we mean by culture? our culture? Perhaps. But what do we mean by culture? The great French educator Auguste Diclos when asked by a student to describe culture replied, "Culture is not," and then he stopped. He repeated and said, "Culture is not encyclopedism." He probably meant that culture is not

knowing everything about everything D knowing everything about everything Devised sisted that culture was not special on the claimed, "Culture is what is left over about forgotten everything," What is left over about gotten everything? Is it understanding sympathy? Refinement of taste? Appendix Modesty of judgment? Accuracy in values? Is sumption of value?

But how does one get a value system today value system unperturbed by the "age of H. Auden; values suitable for the age of the travel, the thinking machine, mixele dras logic, and hidden persuaders. Firms where for an age of "Adventures of the Spirit" as we age of "Adventures of the mind."

It is my firm belief that something of a greatest value, will be found in reaffirming is and practicing in our daily lives, the philosek. It is the philosophy on which America was f

In our sophisticated culture, twenticth een has not really lost his ideals; he has become col-the speed and tensions of the day. Much of the day can be traced to the failure of the moral set any can be traced to the induce of the moral and power to keep pace with the multiplication of p power. In forms more acute than ever in the p confront the ancient contest between flesh and qu controls the ancient contest between item and the technical competence is superb but we have redecid competences of equal importance. For many of estim-are like "a tale told by an idior, full of sound and signifying nothing." This mood was cryptically experience of the second signifying nothing." This mood was cryptically experience of the second secon he records that "this is the way the world ends, not way

In the first place there are too many abroad today at have as their aim and end an ancient Greek philosoph d the Cyreniaes of Cyrene. Their way was called Hedenia -self-indulgence. Their aim was pleasure They indifferent to their neighbors, their civic duties and was events. Theirs was a religion of comfort. As free menter exercised the ballot on election day if it was not rained or if it was comfortable for them to do so. Social ills act not their concern. Their faith was in gadgets and more gadgets. These people are with us today

There are some with us too, both here and aread who live and dream of naked power for its own sale. The create a special problem today because of the shracharacter of the world. Theirs is a nihilistic philos and its quest for power leads nowhere socially or political-We fought World War II because of this way of think-And if you want a reminder of its tragic consequences relations of the formation K_{ampl} . He Norman Cousin's evaluation of Hitler's Mein Kampl. He says for every word in that book 125 lives were lost in the world. For every page, 4,700 lives were lost, and to every chapter in that book, 1,200,000 lives were lost. A third segment of people are dedicated to the philos-ophy of materialism. They believe the history of all existing every in the world is the history of class struggles, fre-man and slace, paractica and plobian. Iouf and serf, guild-matter and journeyman, eppressor and oppressed — all carry on perpetual warders. In their thinking, production of material means of cultures, legal entities, even religious ideas are built. This system does not recken with the vast importance of human personality. It is doublind whether a single historical event culd be interpreted in terms of this theory. But this philosophy has been butteresed by dictatar-ship and slavery and oppression and cruchy and violence and blockhed.

Most of us declare against these philosophies and for the philosophy of idealism, yet we do not seem to have the inner strength to choose. "It takes courage," John Stuart Mill said, "to face the runth regardless of the consequences."

And it takes more than an orderly mind to make right and it takes more than an orderly mind to make right choices. After all, an orderly mind can leave a person un-certain about the purposes of life. There are many examples of persons who use scientific objectifity as an excuse lor being completely neutral on all subjects. They suffer from an overeducated detachment from human experience. It an overcoutated outcomment from nimiter experience. It seems to me that unless measure of belief accompanies knowledge, unless our education has taught us to disti-guish between right and wrong and unless some degree of faith in ideas and principles is combined with a zeal for truth, our education is incomplete.

I therefore hasten today to invite you to re-examine your ideals to see if there is something of value.

The philosophy of idealism upon which our American way is built is the philosophy of the potential in each human being as an individual. It is not a philosophy of things, Lest we mistakenly exchange our true idealism for material things and persist only in quantative factors like physical comfort and pleasure, let us recall the warning of our American poet Stephen Vincent Benet:

You will not be saved by General Motors You will not be saved by prefabricated houses You will not be saved by dialectic materialism You will not be saved by the Lambeth Conference You will not be saved by vitamin D You will not be saved by the expanding universe

In fact, you will not be saved!

If you balance the books on American achievements If you balance the books on American addressments and disregard all that has been written about American shrewdness and inventiveness and our concentration on material things, you will find that our inventions are as much intellectual and spiritual as they are physical. Back in 1897, Dr. Charles Elliot of Harvard bore out the philosophy of American idealism when he wrote of America's five great contributions to civilization. "Five contributions of America constitute our heritage," he wrote, "the keeping of the peace, religious toleration, universal suffrage, the welcoming of newcomers, and the diffusion of well being."

"These I submit have much to do with the aim of material prosperity," he continued, "hut they are essentially five moral contributions, being triumphs of reason, enterprise, courage, faith and justice over passion, selfishness, inertness, timidity and distrust

Nees, timilarly and disruit." You see, beneath what Elliot says, there lies strong ethical sentiment and a strong moral and social purpore. And it is to this that I earnedly summon you today. The challenge is not easy, for in these days, I believe it is in-creasingly difficult to distinguish hereveen better and worce in the world of religion and moral values. Why is this so? My own impression is that we have hopeksily con-fused the law of things with the law of man. We have naively assumed that somehow scientific truth has greater claim to reality than initiative truth; that what we can measure in micrometers is more true than what we can measure in hereings; that the intelligence of the heart and the ideal of love are less respectable than our concept of the atom. of the atom

The challenging question for you and me is whether we can learn to educate our hearts as well as our heads — whether we can combine mentality with morality. I tell you, graduates, a future worth contemplating will not be achieved solely by flights to the far side of the moon. It will not be found in space. It will be achieved, if at all, only in our individual hearts.

The overriding Issue for you this day of your life-and I hope each of you as individuals accept the challenge — is the issue of creating a better moral world for yourself and your contemporaties. You shall need to take stock of your values and find for yourself a firm moral posture. Each of you must attempt, like Thoreau at Walden Pond. "to drive life into a corner, and reduce it to its los

Finally, then, we come to the heart of the matter. Finally, then, we come to the heart of the matter. Something of value, the sommum bound of life, is to be seen in man's dignity — yourst It is the basis, as we said, of our idealistic philosophy. Simply stated, it is the belief that man is the child of God, and that he holds within himself some portion of divinity.

The concept of dignity has been crucial in the history of western civilization which began in Ancient Greece, spread over the Roman world, Western Europe and Britain and finally to our shores in 1607.

The Idea echoed in Emerson's phrase, "Know Thy Worth," was born in the misry dawn of western civilization and the concept of man's dignity and essential worthfulness was deepened by religious folith which advanced one grand law — lave of God, lave of man, lave of self, From the meeting of the Greek secular idea and the Hebraic Christian law we have no less a principle than, "rule of life by reason, in love of God, love of man, and of self." The word dignity embraces both concepts. In this grand idea will lie your challenge in the extraordinary final decades of the twentieth century.

(Concluded on Page 16)

It is a privilege and an honor to present, on behalf of the Faceback tion, and Board of Wilkes College, this candidate for the Honoray D Humane Letters. The College has established criteria for honoray de sistent with its primary mission, the development of a sound intellect and ress of the associated social responsibilities imposed by education in a first honorary degrees awarded by the College are intended to call the Wilkes students. (past, present, and future), the faculty, and the us large, to individuals who personify these qualities. In all the years of Wilkes College has awarded just one other such degree.

Wilks College has awarded just one other such degree. Dr. Charles Price, Blanchard Professor of Chemistry at the Using Pennsylvania and President of the American Chemical Society, in el using professional stature as attested by a partial list of his many award. He is a cipient of the American Chemical Society Award in Pure Chemistry, des-Navy Certificate of Appreciation, the Indiana Junior Chamber of Coamtinguished Service Award, an honorary D.Sc. from Swarthmore College in Honor Scroll of the Chicago Chapter of the Institute of Che-1960 Honor Scroll by the Philadelphia Chapter of the Institute, the Degree the American Chemical Society. Philadelphia Section, the most recent made in recognition of outstanding studies on the chemical basis of anticance resand for his research in the field of high polymer chemistry. To date, he are toos number over two hundred and weenty.

and for his research in the field of high polymer chemistry. To date he pain tions number over two hundred and twenty. In his professional field his public service work is equally impressive. Dr his directed research projects for the National Defense Research Committee the Comfeel Warfare Service, and the Committee on Medical Research. He was Chemof the National Science Foundation Divisional Committee for Mathematikal he ical and Engineering Sciences and served on the National Research Comed an member-act-large of the Division of Chemistry and Chemical Technology Henes as a momber of the Cancer Chemotherapy Study Section of the National Iscurently serving as Chairman of the Advisory Council on Order Chemistry. As noted earlier, he is also President of the American Chemical Sain 71 1954.

These accomplishments in themselves are indicative of an outstanding pulssional individual. Any man could justifiably be satisfied with a career in whit these successes were attained. In addition, however, Dr. Price has also here in individual with the added social and moral concerns for mankind that place here is the top rank of those men of ideals who give of themselves in service to other. He participation in the active political life of our country, his interest in human polthe role of the individual and his profession in the broader context of a free social the role of the individual and his profession in the broader context of a free social three activities have resulted in a number of additional offices and honces, unwe them, President of the United World Federalists, Chairman of the Federal of Board of Managers of Swarthmore College, the Board of the Wistar Instance, the Board of Directors of the American Association for the United Nations, the exp view committee of the Commission to Study the Organization of Peace, and the Frinds Committee on National Legislation.

These then, are the qualifications we submit to you as fulfillment of the criteria we hold to in the nomination for these degrees. The goals of intellectual achievement, professional contribution and social and moral responsibility that Wilkes College strives to develop in its students are exemplified by this man.

President Farley, in recognition of his outstanding professional achievenet coupled with an active concern for social progress and broader international under standing. I am privileged and honored to present to you, Dr. Charles Coale Privand ask you to confer upon him the honorary degree of Doctor of Humane Letters

COMMENCEMEN'T ADDRESS ON EVOLUTION AND WORLD ORDER CHARLES C. PRICE. Ph.D

DAY WE LIVE IN AN ERA MARKED BY DRAMATIC CHANGE — change in political institutions, change in social order, change in economic productivity. These changes are dictated by the dramatic discoveries and developments which have revolutionized our ability to travel, to communicate, to grow food, to combat disease.

The younger generation will not only have to cope with all the mistakes and miseries it may inherit from the past, but the new headaches from the technological revolution. It seems so vast, so fast-moving, so complex as to be beyond understanding or control. However, it offers a challenge and an opportunity which is unique — no other generation has ever come close to having the power to do the things you now can do!

page 7

page 6

The following introduction was made by Dr. Francis J. Michelini, Dean of Acodemic Affairs, who presented Dr. Charles C. Price for the honorary degree of Doctor of Humane Letters. Sometimes. in looking at a complex problem, it is difficult to see the woods for the trees. So I would like to take a long philosophical view — back a few billion years — with the hope that it may help put our present problems and purpose in focus.

The progress of science has begun to give us an amazing glimpse into the universe, its history and the major principles which guide it. We have challenging new knowledge of time and space, new projections into the infinite, and the infinitesimal, new understanding of genetics and the chemistry of life, new theories to explain the birth, life, and death of stars. The understanding of this latter begins with the understanding of the fundamental particles of nature.

We now know some of the basic characteristics of these elementary particles of matter, the proton, the electron and the neutron. We know their infinitesimal size and mass, their electric charge and their incessant motion and kinetic energy. These wave-like particles swirl eternally through the vast reaches of space, guided by electrical, magnetic, and gravitational fores. The Van Allan radiation beli, e.g., is the result of protons radiated from the sun and captured in Earth's magnetic field.

For reasons still not known, these diffuse gases can gradually accomulate in areas of the universe, slowly condensing as a readt of gravitational attraction into vast switcing gaseous nebulae. As an immense mass of these protons and electrons, in the iorm of hydrogen atoms, condenses further and further, the temperature and pressure of the max-bergeass until eventually the violent conditions increasing for the hydrogen fusion reaction are these of new some somplex chemical elements by fusion of the simpler elementary particles.

The natural and strong repulsion of protons, because of liner positive electric charge, is overcome and they are induced to combine, through sharing of neutrons, into the nuclei of the other one hundred chemical elements of the periodic salle. This possible combination is an inherent property of the proton and neutrons, but can, in fact, occur endy ender the violent conditions of temperature and

pressure in a living star. Presumably, the earth was eventuelly born as a bit of Tfallout" from some violent perturbation of our parent star, the sun, as the hydrogen fuel was gradually consumed or ejected, the mass of incandacent gaseous atoms began to cool slowly into the tiny cinder which is sour earth, a small millions in our galaxy, in turn but one of many galaxies in the vast reaches of snace As the temperature of our earth solves the of degrees to about its current least, its nuclei captured electrons to become cause of the outer electrons, atoms normally repl some of them are able to combine with each more complex structures known as more too by forces inherent in the atoms, but too in held together in the more violent days of the of earth. Responding to the stimulus of the other molecules were electrical dicharges, more somplex molecules were electroned sharing of tween elements, dictated by principles items

Sometime, somewhere in this welter of print chemical change, an incredibly unlikely event occurred - the organization of a "comments" molecules, able to perform the miraculous transform of energy and chemicals to reproduce itself. N yet really fully comprehend the bridging of the app tween inanimate chemistry to the first living on-sales ganism, even though we have made fantastic and a past decade or two to understanding the fundament chemistry of the living process and of reproducing and it in the laboratory. But given the vastly complicated doical machinery of the simplest one-celled organism, area now comprehend the slow, faltering process of manand adaptation which led to the proliferation of all the on this planet. We know that the amazing DNA maleria in the nucleus of every cell carry the coded information: instruct a new cell in its exact duties. We know that the molecules can be modified by chemicals, by radiation, b viruses, in such a way as to transmit modified information and thus cause mutation. We know the detailed struttre of the four units of DNA molecules, strung together is units of 100,000 or more. We are even beginning to be abto decipher the code on these giant chain molecules, to set how they transmit their detailed instructions for prove synthesis to the new daughter cells. We know that there are amazing similarities in the chemical constitution erd chemical functions of compounds in the simplest ever celled organism and in man.

But what does all this knowledge of evolution and the facts of life tell us of the purpose and meaning of life Car our understanding of the chemistry of the living cell capture the creation of a Beethoven symphony, the Declaration of Independence, a Shakespearean play, the theory of evolution? These are but examples of the remarkable creative force of life, of modern man and human civilization. I would like to suggest that one of the most amazing secrets of the life process is the ability of a complex array of molecules in a living cell to convert energy in such a way as to reverse the normal laws of thermodynamics by creating a fontastic and improbable order out of a chaos of atoms and energy. In a sense, we may say that human society is in fact analogous to a system of living cells in a living organizm. In the same scarse that the biological cell uses the coded information in the DNA of its chromosomes to organize and control its exitivities, so human society has been evolving ideas and institutions to organize and control its activities. The human mind can creatively organize sounds into a Beethoven symphony, words into a Shakepearen play, political principles into an American Constitution.

Evolution has dictated that those biological organisms can survive which can so organize their functions as to permit survival — and to make survival worthwhile I is it not clear that this drive to order and organization is now crucial to our society if at is to survive the challenges it now faces?

Science has given man the key to cosmic energy, the ability to shrink time and distance, the knowledge to combat disexe. Usus as living organisms had to evolve more complex control mechanisms as they grew ever more complex, so our society must evolve and adapt or, as the inexorable laws of evolution dictate, it will become as obsolette as the dodo and the carrier pizeon; the dinosaur and the sabre-tooh tiger. Incidentally, perhaps we should require the cold (and hot) warriers among us to contemplate life-size statues of tyrannoscurus rer and the sabretooth tiger for one minute every morning! Perhaps this would eventually register the idea that these species did not become estinet because of physical weakness. In fact, it may have been their super-efficiency of destructive power which doomed them — while the lowly earth worm and cocktoach go on and on.

In summary, then, I can discern a fascinating pattern running through what I can see as the history of physical, biological, and social evolution.

For atoms, protons, the fundamental units, were induced under the proper conditions to overcome their natural repulsion and to become bound together in more complex atomic nuclei through sharing of neutrons. They then have a new character, identity, and function, distinct from the sum of the parts.

For molecules, atoms, the fundamental units, were induced under the proper conditions to avercome their natural repulsion by sharing electrons, thus elaborating the vast, complex, and vital array of chemical compounds which make life possible. Again, the compounds have a character, identity, and function greater than the sum of the parts.

page 9

page 8

In living cells, chemical compounds in great variety and number are highly organized into a cooperative community necessary to accomplish the complex functions involved in the life and reproduction of the cell.

In the vegetable and animal kingdom, living cells, the fundamental units, associate into living organisms to elaborate the amering variety of living beings, each with its multitude of cells organized and controlled to serve purposes necessary to the life and function of the whole. And, certainly, a human being is a vastly different organism than an equal weight of amerebal

In the human kingdom, the most recent addition to this evolutionary hierarchy, the human being its the "Inndamental particle." He has gradually overcome natural repulsions and antagenisms to organize more complex social structures, the title, the city state, the kingdom, the modern nation state. In each case, the forces of cooperation bound larger and more complex units linto a living, functioning whole. The family was the basic unit when huming natural foods was the basic so survival. When agriculture evolved, a more complex organization into tribes was required. As collitation evolved and trade become important, the ancient city state became the basis of political organization. Now these inituitions have grown into the modern nation state and the modern corprestion

Today, having drastically modified our environment by releasing cosmic forces here on earth and by substantially altering the natural conditions which in the past controlled the human population, new adaptations are vital to survival. We must use the vital force of love, undestanding, human compassion, or more buildly, the basic urge of life to survive and create, in overcome our natural antagonisms and conflicts in order to cooperate in the building of world order and world-wide law — or our evolutionary experiment, as with many in the past, may well be terminated by extinction.

There are those among us who are opposed to such ideas on the basis they may destroy our constitution and undermine our principles. It would just say this for their benefit It is crystal elear that while extinction is the penalty of failure to evolve, successful evolution builds on the past and does not destroy. It Potons remain in atoms, atoms remain in molecules, molecules retain their identity and function in cells, cells retain their identity and function in living organisms. So must successful evolution of social organization retain the identity and function of individuals, of families, of local groups, of cities, of states and of nations in a successful evolution of the United Nations into an effective instrument of international law and of zet, i.e., a world federal government. Evolution in the physical and biological world has been guided largely by the basic characteristics of the fundamenal particles of matter, their mass, charge and wavelike nature, as well as their response to electrical, magnetic, and gravitational forces. To a minor degree, chance has affected the process. The same may be said of social, poliical, and economic evolution, with the important exception that the ecolution can now, at least to some extent, he guided by the conscious and rational decisions of men. We are thus the first unit in the evolutionary sequence discussed above which is able to guide its some evolution.

We are now at the stage of evolving worldwide political and economic institutions—the United Nations, World Bank, World Health Organization, Food and Agriculture Organization, and ESSO are examples.

We have seen in 19 years some remarkable evolution of the United Nations. Kerea proved that its original concept of voluntaric collective security was impractical, but it led to the "Unite for Peace" resolution, an important new concept or "mutation" designed to avercome some crippling aspects of the Security Council veto. Despite vigorous sofiet objections at the time, the first use of this new procedure came at use time of Snee, and the Soviet voide to use first invavient Particle action, still on duty to neutration a pressional perce in this tradiction.

When the Conso called for help to pacify the disentlies of its ment pangs, the UN took another historic also in fact-range to establish order in this educal area.

In event times, the UN has even demonstrated that it even adhenes the pilietes of the major parsers. In the Compy its resolution forced the evaluation of a Soviet different set in a help Lumumts dely the central government.

In Cohe certainly one factor restraining American forest from supporting the Bay of Pigs invasion was the strong and universal sentiment at the UN against such prope.

But much remains to be done. The UN still does not operate on the basic principles shown by the lessons of history to be successful at all other levels of political organization. Suppose we could only be requested to stop at red lights or to travel on the right side of the road — and could arm to the texth to defy anyone who tried to compel us in do say Suppose our local, state, and national goornments could only request contributions from their citizens rather than levying taxes? Suppose we had to have a meeting of the City Council to vote whether to recruit a fire company only after the fire started and bate whether all the costs should be been person whose house burned down or by a started the fire? Suppose any individual of a crime could refuse to be taken to start only way to punsh the treasurer of a sconding with funds or murdering his neighbor the entire corporation responsible?

These principles would seem relicious at practice them in the City of Philadelphis, yet principles on which we now try to run the Using the institution charged with preventing nuclear

How can we change this state of affects () we need to seek agreement, here among here throughout the rest of the world, that it is a advantage to cooperate in revising the United V, an effective and responsible instrument of pelaw and order.

Perhaps this can be done in steps by gradtion rather than by revolution. If so, solving the crisis of the UN by giving it the authority to loss direct taxes, perhaps an excise tax on interactand transportation might be a possibility.

Secondly, progress toward genuine disargances a automatically clevate the position of the UN by detect the ability of any nation to defy the UN.

This country could do much to enhance the above the World Court to acquire compulsory juridicate or many types of disputes involving the United Steep E repeal of our self-judging reservation on the World G

It is not possible to know with certainty has an present problems and conflicts can be resolved. It does see clear, from the long history of evolution, that strong ration opposition can be overcome, under propitious cirstances, by coordinated cooperation. The development worldwide trade, travel, communication, the vital interdependence of the welfare of all peoples, and the use threat of nuclear destruction may, combined, provide it. propitious circumstances. Can we use our heads and en hearts to find the means to cooperate? Under Eisenleuer Kennedy, and Johnson, America has set this as a great goal. But the task ahead will be neither easy nor free controversy. In our society, each of us has the right and duty to express his views on such questions in whatever way he may feel will be effective and responsible I urp each of you to find some way to work for a better. mete cooperative community at the local, national, and world levels. In this way, each of you can make your contribution to the grand design of evolution.

I JINII KESPUND IO IHIKU HINUHL SENINAR

Satisfaction by alumni, pleasure by the faculty, and even impressed approval by the President of the United States and the Governor of Pennsylvanis marked the Third Annual Wilkes Alumni Seminar.

Most alumni interviewed at the seminar on May 16, and the majority of those responding to the seminar questionnaire sent through the mails, have averwhelmingly endorsed the seminar concept in general. Most have also indicated their enjoyment of the particular sessions each attended, and have been gratified with the faculty and student participation in the meetings.

Polling of participating faculty members confirms much of the alumni response, with professors particularly warmed by the number of former students attending their sessions, and the active participation of such alumni in question-andanswer periods following the faculty talks. Many were forced to run overtime sessions because of the enthusiasm engendered.

page 11

page 10

Students of all classes attended the seminar this year, following recommendations made by alumni at last year's sestions. Seniors and underclassmon alike have declared themselves highly impressed not only by the quality of the seminar professors outside the classroom and with alumni actually out and practicing in the students' chosen professions. Students consistendly report that they found this chance to exchange ideas and learn both stimulating and gratifying.

a gratified with the laculty and student participation in meetings. An unexpected source of approval for the concept and function of the seminar came in messages from President Polling of participating faculty members confirms much. Lyndon Johnson and Governor William Scranton.

> In a letter to Director of Alumni Relations, Gordon Roberts, the President indicated "very much interest in what you are doing to stimulate your alumni to continue their education," and added that he had brought the seminar program to the attention of the U.S. Offsee of Education.

Following up the President's comments, Commissioner Cornert of the Office of Education, part of the Department ind indeed studied the seminar program at Mr. Johnson request, and was also impressed, "not only because of the soundness of the control idea that a college has a responsibility for stimulating its graduates to continued intellectual growth, that because of the wide variety of topics covered and the balance so evident in their total scope."

Governor Scranton, in a message to Wilkes officials, commended them "for offering Wilkes graduates an opportu-nity to continue what should be a never-ending process of

We see that the obthe universe is not the shattering power of the the vitalizing power of love, the love of our Cathe vitalizing power of love, the love of mart is the love that we should have for him and fer human beings. Today we must begin to Exthese new terms, living not as machines mouther ficial space, but as children of our Creator, mouth domain of the spirit - in love.

Kahdril Gibran says most beautifully what I upon say to you today:

You give but little when you give of your posterior It is when you give of yourself that you truly give

There are those who have little and give it all

These are the believers in life and the bounty of life all their coffer is never empty.

There are those who give with joy, and that joy is their reward.

And there are those who give with pain, and that pain is their baptism.

And there are those who give and know not pain in giving, nor do they seek joy, nor give with mindfulace tue; they give, as in yonder valley, the myrile breathes its fragrance into space

Through the hands of such as these, God speaks, and from behind their eyes, He smiles upon the earth

Life is indeed darkness save when there is unce. and all urge is blind save when there is knowledge Ard all knowledge is vain save when there is work an all work is empty save when there is love and when you work with love, you bind yoursell to yoursell And to one another, and to God.

And he alone is great who turns the voice of the wind into a song made sweeter by his own loving.

The Meaning of the Arts In Education by Alfred S. Groh, '41

The arts, to flourish, need an open society. Their mean-ing is always linked with freedom. Skills and techniques can be tought and acquired, but the arts, like religion, must liberate the creative spirit rather than confine and inhibit it.

To live in a world of truth, the individual must be ded-icated to freedom. The arts encourage free and open inquiry

into the nature of ideas. Through expression in the arts we keep in our souls images of magnificence.

The arts are intensely personal. They require attend-ance and attention. You can read about Marlows's Dr. Faustus, but you have to bear the lines and see the perform-ance to feel the agony of a man deprived of salvation. Lady Marbeth's words, "Hell is unrely," are an awareness of a divinity that shapes our end, that cleaness and purifies the spirit. Four and darkness are symbolic of the depths of human despair.

Education in the liberal arts opens the mind to the world of ideas. The mind, like the palm of one's hand, must be open in order to give as well as to receive. A clenched fist, like a closed mind, tighters around itself and cuts off communication. It breds volonce, hate, and perpetuates prejudice, and leads ultimately to withdrawal from the world of ruth.

MORE THAN DISCOVERY

by Alfred S. Groh, '41

Proloque

More than discovery of a land, More than a school, a fort, or steeple Long, long after a queen's command, America was the discovery of the people. The New World offered all of those The right to worship as they chose.

Columbus hailed a Spanish ship And made his epoch-breaking urip. A passage that he would regret — For Europe wasn't ready yet.

And the land of rivers waited, While a century debated.

America was talked about in Spain. Adventure was a fever in the brain. For English, French, and Swedes oppressed, Freedom was a current running west.

1V Well up the Valley of the Susquehanns. And the Valley of the Delaware, The Middle Colonies prospeced On lond in abundance there: Quakers, Germans, Scotch-Irish, Who were not really Ifish at all. Irish, French Huguenots, Polish, and Welch — The groups were many but small. Any time a sail appeared, A curious savage saw it come. The violence to those on shore Brought by those on board was more Than either ever feared: The violence, so strange to some, Was what they were escaping from. The New World offered all of those

ш

For those who trap or fish or trade The arts and learning are delayed.

People living by the sea Encountered hardships constantly. Shipbuilding furthered foreign trade By a frugal people, unofraid.

IV

The right to worship as they chose.

The American chair, cupboard, or chest Was as plain as a Puritan sermon, Like the Pennsylvania Dutch, Who were really not Dutch but Germon.

The New World offered all of these The right to live the way they please.

As class distinction disappears, An aristocracy has fears, Proclaiming and expounding Doctrines high-sounding. Many a tobacco autocrat

VI

Became a gentleman in haste. When one could buy the work of others, One could cultivate one's taste. VII

Shakespeare and sermons, Hornbooks and spelling bees Taught that independence Is never earned with case.

When a thriving people abdicate, Never meaning to. The things that they should legislate, Others always do.

Thirteen colonies, thirteen states Only geography separates Guaranteed inalienable rights The world was moving toward: To the people as a whole, Governed by conscience, not control.

VIII More than discovery of a land, More than a school, a town, or steeple, Long, long after a queen's command, America was the discovery of the people.

So much of the Old Country Has come here, seeking, That the voice of America Is all men speaking

To profit from the enterprise, Companies helped them colonize.

Freedom was bitter, bearded, strong Like the wilderness it pushed along.

"To build a City of God on earth." Many left their place of birth.

п

(Baccalaureate Address continued from Page 5)

As you leave this place, it seems to me that it will be something of value, yea, greatest value, if you will aspire with all your heart, your soul, and your mind, to find out what you are, who you are, your sole, and your mong to find the what you are, who you are, your chief aim. These are the questions which Paul Tillich calls "the dimension in depth," I am referring, unapologetically, to your concept of the dimension depth. depth." I am referring, unapologenenity, to your concept of the divinity that lies within you. There is an observable unconcert to this today and I think it is partially created for us by the superficiality of the prevailing religious cul-ture. To me, religion is the quest for that meaning which there is a superficiency of the prevailing religious for the prevailing the superficiency of the prevailing religious for the prevailing the pr The construction is the quest for that meaning which has power to give shape to experience, purpose to existence, and motivation and meral energy to the human experience. Correlatives to it are intimacy and ultimacy, firstude and transcendence, nature and history, good and evil, the self and the other, faith and doubt, despair and hope, life and death. These mustime are experient and end end meral death. These questions are peculiarly and poignantly numan and we have neglected these, with a gross loss in life's real meaning the result. It is not a case of these ques-tions having been asked and found to have no significance - rather they have been found difficult and not asked.

Occasionally in your lives, when the accumulated dust of creedal dogmas and man-made idols clouds your vision in cream any normal man-made nonvectors your vision and obscures your divine image. I ask you to wipe away the artifacts, not with the undignified cloth of base action. but with intelligent and dedicated self-questioning, like the Psalmist of oid who looked upon the vast mystery about him and asked, "What is man that Thou art mindful of

And finally, how do you answer the ancient yet current question which the Psalmist asked? I think you will tem quantus and the radius are a first to be a first source to be a first source and the source communication with God and knowledge of His work among us through inner spiritual discernment, a phenomnot susceptible to proof or disproof through science or philosophy. For God is spirit - the spirit of love,

Seniors, the numbling, enlightening, and emancipating ounter with the power beyond ourselves, which we call God, is an exclusively personal matter, its realization and interpretation depends importantly upon factors of human origin, culture, and tradition. But the world we tend to origin, culture, and tradition. But the world we tend to adopt is one of things and is too impersonal. Religious faith, hope, and lave are personal responses to a personal God and can thrive only in a personal universe. I fear that too long we have excluded these fundamental questions that the wavelet and limits of personal universe. about the meaning and limits of personal experience.

Wanted then above everything else is something of Wanted then above everything else is something of value You will find it within yourself in the spirit of God which dwells within. You are a creature of God, "Thou has made him," sad the Padmist in answer to his question. "Thou has made him a little lower than God." And God which dwells within you is love. So if the God of love which avers within you there is an objective standard by which within you will be judged in secret. You will then develop a conscience and you will meditate upon the law of God. Your science and you will meanate upon the new or God, rour greed and self-centeredness will be effectively carbed; your greed and sett-centeredness will be encenvery curned; your cupidity and desire will be turned to higher ends than those

in vogue today. You will see clearly the and snares of the times in visa "Sumething of Value." Man has to "Something of Value," Man has the been disappointed, but whe has never been disappointed. "Is age. The immortal world of love is

May I add even the new thinking Way I and even the new initial look into the atom indicates that world. There is a unity in the world or than the sum of the parts. In a or than the sum of the parts in a also see better our relations to corinfinitesimal beings on a small plane the universe. Somehow, in this men enlists say the universe merges universe vision we can understand how there the universe who holds in his hands the of the stars and at the same time is loving father ready to strengthen to it -

We see that literally the kingdom of buus and within us, that there is a spirreality far deeper and more signifi-tangible and visible. We see that the the universe is not the shattering pract the vitalizing power of love, the love of a the love that we should have for him and f human beings. So much of the Old Cour Has come here, seeking, That the voice of Americ Is all men speaking.

(Baccalaureate Address continued from Page 5)

As your leave this place, it seems to me dhat it will be something of value, yea, greatest value, if you will aspire with all you near, you you are, your chief aim. These are the questions which Poul Tillich calls. "The dimension in depth." I am referring, unapologicitally, to your concept of the divinity that lies within you. There is an observable unemeern for this today and I think it is partially created for us by the superficiality of the prevailing religious calure. To me, religion is the quest for that meaning which has power to give shape to experience, purpose to existence, and motivation and moral energy to the human experience, consendence, nature and history, goed and exil, the soft and the other, faith and durith, despiri and hope, tife and genth. These questions are peculiarly and poponting life' real meaning the readi. It is not a case of these questions invite the sale and found to have no significance - atther near meaning the readi. It is not a sale.

Occasionally in your lives, when the accumulated dust of creadial dugmas and man-made idols clouds your vision and obscures your drivine image, I ask your to wipe away the artifacts, not with the undigrified cloth of base action, but with intelligent and dedicated self-questioning, like the Psalmiss of old who looked upon the yast mystery about him and asked, "What is man that Thou art imindful of mare".

And finally, how do you answer the ancient yet currem question which the Posimist acked? I think you will find your grade to something of value in an idealistic alternative — prophecic faith. A belief in a power beyond yourself, in our individual we call this force Gort. We find among as iterated our and knowledge of Hijs work emanagements in a spiritual discontance, a phenomrem are interpretic to proof a dispert through science or anti-activity. For Gort is spirit— the spirit of toys.

in the characteristic of the second structure and structure of the second structure, which we call welve personal matrix is realization and ends importantly upon factors of human and radiation. But its world we tend to things and is too impersonal. Religious and ince are personal responses to a personal only in a personal universe. I fact that excluded these functional agestions and ince are defined to personal experience.

Would men above everything else is something of adiab You will ind it within yourself in the spirit of God abich dwelks within, You are a creature of God. "Thou has made him," said the Paalmis in answer to his question, "Thou has made him a little lower than God." And God which dwells within you is love. So if the God of love dwells within you site were to will then develop a disconscience and you will needitate upon the law of God. Your expirit and solve will be effectively curbed; your cupidity and desire will be turned to higher ends than those in vogue today. You will see clearly through and snares of the times in which you li-"Something of Value." Man has tide even been disappointed, but whenever man has has never been disappointed. "Kore never has never been disappointed, "Kore never has never been disappointed, "Kore has never been disappointed." The time has never age. The immortal world of hove a industra-

May I add even the new thirding of access look into the atom indicates that this is world. There is a unity in the world and is a set of the sum of the parts. In this person is also see better our relations to our cave a infinitesimal beings on a small planet in a reaction to the set of the set of the set of the entities say the universe merges with us at wisno we can understand how there are be informed and and the same tame is close to the universe who holds in his know the loc of the same and at the same tame is close to lowing father ready to strengthen us if we are

We see that literally the kingdom of heavy us and within us, that there is a spiritual direlity far decare and more significant size tangible and visible. We see that the ultratice of the second second second second second the visibility power of low, the low of our Court in the visibility power of low, the low of our Court in the visibility power of low, the low of our Court in the visibility power of low as machines and the visibility of the second second second the visibility of the low of the second second the visibility of the second second second second the visibility of the second second second second the visibility of the second second second second the second second second second second second domain of the spirit — in low.

Kahdril Gibran says most beautifully what I are say to you today:

You give but little when you give of your proceeder

It is when you give of yourself that you truly give There are those who have little and give it all These are the believers in life and the bounty of Piccol

their coller is never empty. There are those who give with joy, and that joy is

their reward,

And there are those who give with pain, and that pain is their baptism.

And there are those who give and know not pain in giving, nor do they seek joy, nor give with mindfulse of virtue; they give, as in yonder valley, the myrtle breathes its fragrance into space.

Through the hands of such as these, God speaks and from behind their eyes. He smiles upon the cath

Life is indeed darkness save when there is urge, and all urge is blind save when there is knowledge. And all knowledge is vain save when there is work, and all work is empty save when there is love, and when you work with love, you bind yourself to yours? And to one another, and to God.

And he alone is great who turns the voice of the wind into a song made sweeter by his own loving.

The Meaning of the Arts In Education by Alfred S. Grob, 41

The arts, to flourish, need an open society. Their meaning is always linked with freedom. Skills and techniques can be taught and acquired, but the arts, like religion, must liberate the creative spirit rather than confine and imhibit it.

To live in a world of truth, the individual must be dedicated to freedom. The arts encourage free and open inquiry

MORE THAN DISCOVERY

Prologue

Any time a sail appeared, A curious savage saw it come. The violence to those on shore Brought by those on board was more

The violence, so strange to some, Was what they were escaping from

Freedom was bitter, bearded, strong Like the wilderness it pushed along

"To build a City of God on earth,"

Many left their place of birth.

To profit from the enterprise, Companies helped them colonize.

П

Than either ever feared:

 More than discovery of a land, More than a school, a fort, or steeple Long, long after a queen's command, America was the discovery of the people.
 The New World offered all of those The right to worship as they chose.

 Columbus hailed a Spanish ship And made his coch-breaking trip. P Europe wash't ready yet.
 The new World offered all of those The right to worship as they chose.

 To those who trap or fish or trade To Europe wash't ready yet.
 For those who trap or fish or trade The arts and learning are delayed.

 And the land of rivers waited.
 Shipbuilding furthered farcing trade by a frugal people, unafraid.

America was talked about in Spain. Adventure was a fever in the brain. For English, French, and Swedes oppressed, Freedom was a current running west.

Well up the Valley of the Susquehanna And the Valley of the Delaware, The Middle Colonies prospered On land in abundance there: Quakers, Germans, Scotch-Irish, Who were not really Irish at all, Irish, French Huguenots, Polish, and Whelb—

Welsh — The groups were many but small. The New World offered all of those The right to worship as they chose.

IV

V The American chair, cupboard, or chest Was as plain as a Puritan sermon, Like the Pennsylvania Dutch, Who were really not Dutch but German.

Like the Pennsylvania Dutch, Who were really not Dutch but German. The New World offered all of these The right to live the way they please.

page 17

page 16

into the nature of ideas. Through expression in the arts we keep in our souls images of magnificence.

The arts are intensely personal. They require attendance and attention. You can read about Murlow's Dr. Faustus, but you have to breach the lines and see the performance to fed the agony of a man depirved of salvaion. Lady Matcheth's words. 'Hell is murky,'' are an an astarcness of a divinity that shapes our end, that cleaness and purifies the spirit. Ferer and darkness are symbolic of the depths of human despair.

Education in the liberal arts opens the mind to the world of ideas. The mind, like the palm of one's hand, must be open in arter to give as well as to receive. A clenched fist, like a clred mind, tightens around itself and cuts off communication. It breeds violance, hate, and perpetuates prejudice, and leads ultimately to withdrawal from the world of ruth.

VIII More than a school, a town, or steeple, Long, long after a queen's command, America was the discovery of the people So much of the Old Country Has come here, speking,

Has come here, seeking, That the voice of America Is all men speaking.

A M E R I CA ANSWER OF

Proloque

Gifts of pearl, Gifts of gold,

For such as these

Hearts grow old.

Writ on sand,

Carved on stone,

Life is sinew, Flesh, and bone,

Gifts of gold,

Gifts of pearl,

Love the girl.

Built of brick,

Built of sod,

Foolish when you

The house is always

by Alfred S C

America means different things to some, It holds out promises to those who come. The difference is in us, and not the land. Whether we keep or not its stern command. Whatever made America, good and bad. Came from a conscience the nation had, Shaped us to its will. And, ever changing, shapes us still.

THE BLUE AND THE GRAY

On a battlefield in Gettysburg, Where Americans had died. A child perceived differences Which, unresolved, divide.

On a battlefield in Gettysburg, A child's eyes opened wide: The difference is in us, they said, And what we feel inside.

THE FARMER

By the sweat of our brow And a friend or two Our strength increased And our largess grew.

With a mule and a plow, In war years and after, We planted strength And harvested laughter

THE MINER

Ding — Dong — Ding — Dong — Toll the bells of sorrow. Ding - Dong, Ding - Dong, Back to work tomorrow.

Drop the cage, Light the lamp, Raise the pillars, Build the ramp.

Wound of the earth, Scar of the soil: The pain is ours For the land we spoil. A house of God.

THE HOMEMAKER

THE BUILDER

There is bread upon my table And in my oven meat. Stranger, you are welcome To come inside and eat.

Come, sit down beside me Before you go your way. I too was once an exile, I too was asked to stay.

It cannot be so long ago That I was hungry too And gnawed the marrow in my bones, Much the same as you.

And now that I have strength to give, And more than I shall need. Truly, you are welcome To come inside and feed.

There is food upon my table And in my cupboard wine: I marvel that your coming Should be so much like mine.

THE MEDICINE MAN I took my money to the county fair To see what medicines were there.

I met a man in a canvas booth Who sold me a bottle of eternal youth. I exchanged the bottle for a secret salve That would cure the ills I didn't have.

I exchanged the salve for an exotic fern To bring me things I didn't earn.

I exchanged the fern for a magic stone, When I saw a sign, "Is your life your own?" I took the stone to the man in the booth And exchanged it sadly for the truth.

THE SCHOLAR I taught my sons right from wrong,

But they were quick to see That you can win a world with song So easily.

I taught my daughters how to choose But they were quick to learn That everything you win or lose You carn.

Day by day. The world we greet tomorrow

Who can prophesy its future, Or what we will become? The meaning of America Is different things to some.

The answer of America Was made long ago In the labor of the people Who loved her so.

page 19

page 18

I taught my children true from false, But I was quick to see That everything which I taught *them*, *They* had taught to me.

THE JUDGE

I ask protection From theft and greed, The hunger born Of a desperate need.

l ask protection From the tyranny of mind That threatens one's right To seek and find And discover knowledge Of every kind.

I ask protection In the constant quest, From the tyranny of self That haunts my unrest.

THE SCIENTIST

A man's life is answers. Before he learns or speaks He begins the search for wisdom, Not knowing what he seeks.

He begins his search for truth, Unmindful of its worth. A man's life is questions, From the moment of his birth.

Epilogue America is changing Is already on its way.

TRUTH O F WORLD by Alfred S Ges

. will go Up from the valley Out of the town Over the mountain And travel down Into the world I know in books

And see for myself The way it looks. Libink I know What I shall find When friends and city Are left behind And into the world I travel down Over the mountain

To another town. People who leave Their place of birt To wander between The poles of the earth To settle down In a little town

Come with me Over the mountain And travel down Into the world You know in books

And see for yourself The way it looks.

There is the world know the world Of neighborhoods I see in books Buying and selling Is different From the way it looks Each other's goods But I was taught Wanted by some Needed by more From what I read Exchanged in trade The earth is the Lord's Taken in war. As it was said. There is the world Truth and beauty

In shadowland Though denied Where freedom itself Still exist Is contrahand Side by side. Stored on docks There is no world That I can tell Or purged away Where truth and beauty Do not dwell. There is the world

The earth is turning

And a wind stirs.

Of black and white Where judgment flies In sudden fright Before extremes Of left and right People And terror brings Like ancient mariners Incessant night. Chart their course There is the world On a wandering star Of fairy tales To fix the position Turned topsy-turvy Where they are, On the scales Where everyone laughs The earth is moving

At the nursery tune While people wait Of the sacred cows And hope the time That race for the moon Is not too late For men to change There is the world And then create Of every man Another world Who does as little And a different fate.

Complains and moans And shakes his head And grumbles On his way to bed. There is the man

Who never hears The melody Of passing years Whose life is spent Righteous and grim A prisoner Inside of him.

As he can

In bins

Like sins.

M.y life was ch In a single stroke By someone who lists While I spoke And she was young And fair and wise And the whole world Was in her eyes

There is no world That is so small That love is welcom Not at all. There is no world That I know of That cannot hold A little love.

She it was Bade me go Into the world I have seen and know Where a fresh wind blows And sets us free To voyage On the open sea. This is the world I would not choose

To silence or banish Or refuse. Let it suffice That in my youth I had a rendezvous With truth.

The Alumnus will feature stories on these Peace Corps members in future issues

page 21

Wilkes College faculty held a testimonial dinner at Irem Temple Country Club. following baccalaurcate, to honor Professor Voris B. Hall, who is retiring this month as chairman of the engineering department, a position he occupied since 1936.

Also attending from the departments of mathematics and engineering at Bucknell University were six members originally assigned to the Junior College when Bucknell established that institution in 1933.

Dr. Raymond H. Young, '41, associate professor of electrical engineering at Bucknell University, was the principal speaker. Dr. Young said, "Professor Hall guided us with care and wielded a heavy red pencil. We knew we had worked hard, learned much, and respected Professor Hall."

Dr. Yoang continued, "Wilkes transfer students in engineering wind up at Buck-nell at the top of the class," and he thanked "V. B. for the excellent students we get from Wilkes at Bucknell, when we are fortunate enough to get them." Dr. Charles B. Reif was master of ceremonies.

Speaking briefly of Professor Hall's participation in the growth of Wilkes and in its birth, Dr. Eugene S. Farley announced a scholarship to be named in honor of Voris Blaine Hall for a student in the curriculum of physical science or engineering.

Wilkes College alumni, who are continuing their studies in some field of blokgs, presented recently to our College a pastel painting of Mrs. Edith Namisnia, by artist Niccolo Cortiglia.

Mrs. Namsniak, formerly assistant professor of biology, retired earlier this year as a full-time member of the biology department. The painting will be displayed in Stark Hall of Science.

 ALUMNI
 In Stark Hall of Science.

 PRESENT
 For Irring Snyder, '53, coordinated the efforts of alumni in honoring Mrs Namisniak. At THE PRESENTATION ARE LEFT TO REATT: Dr. Charles B. Relf, chairman. Department of Biology: Charles Krivenko, president of the biology club; Cordon E. Departs, '60, Director of Alumni Relations; Mrs. Namisniak, Niccolo Cortigla; Dr. Francis J. Michelini, Dean of Academic Affairs.

GALLAGHER AND JONES OUTSTANDING **GBADUATES**

Two members of the Class of 1964 distinguished themselves academically and in significant contributions to the life of our College over a four-year period. Barbara A. Gallagher of Hazleton, Pennsylvania and James A. Jones of Llewellyn, Pennsylvaria were selected by an alumni-faculty committee as Outstanding Graduates of 1964.

Barbara Gallagher, an English major, plans to attend graduate school next year. She received honorable mention from the Woodrow Wilson Fellowship Program.

James Jones, a biology major, was vice-president of the Student Government, proctor of Warner Hall, and has been accepted by the Peace Corps to serve in Nyasaland, Africa.

SHOWN ABOVE ARE, LEFT TO BIGHT: Altorney Eugene Roth, '57, Vice-President Alumni Association; Leonard Muleahy, '58, President Alumni Association; Barbara A. Gallagher, '64, James A. Jones, '64, and Gordon E. Roberts, '60, Director of Alumni Relations

Shown below are the recently elected officers and trustees. SEATED LEFT TO RIGHT: Richard Shemo, Forty Fort, Vice-President; Alan Gubanich, Phoenixville, Pennsylvania, President; Lorraine Dyers, Kingston, Secretary; John Campbell, Flushing, Long Island, New York, Treasurer.

CLASS STANDING LEFT TO RIGHT: James A. Jones, Llewellyn, Pennsylvania; Fred Smithson, Bridgeton, New Jersey; Gail Roberts, Wilkes-Barre; Michael Landesman, **NF '64** Little Neck, New York; Richard Burns, Baldwin, New York, Trustees.

DR. KASHATUS NAMED TO TOP MEDICAL POST

2

MEDICAL FOST Dr. William C. Kosnaus, 'SI, has been named assistant direc-ter of the clinical laboratories of the thoheman Haspital and Medical College or Philodel-phia. With this position he nolds title of instructor in pathology in the medical college, where he is active an numerous com-millers. mitlees,

Bill received his 8.5. from Wilkes in Chemistry, his M.S. degree from EuroPII University and chemistan Weiscle College, Namende at WilceAberts Control 1000 E. ROBERTS, '60, Director of Alumni Relations here at the Callege, will speed the summer at Edihory Uni-

Bill served with the 101st Air-borne Division and the Army Medicai Research Laboratories. He is a member of the Ameri-con Legion Post 539.

He is married to the former Bolbina Ann Markiewicz. They have two children, Ann Steph-anie and William C., III, and reside at 1036 Bloomfield Avenue, Philadelphia

ACORNLEY, '59, CERTIFIED PUBLIC ACCOUNTANT

PUBLIC ACCOUNTANT William E. Accornley, '59, has been notified arecomity by the Pennytional Board of Ex-aminers of Public Board of Ex-tination of Public Board of Ex-tination of Public Board of Ex-Public Accountant examinates fill is an ember of the accoun-ing staff of Weiss, Bear, and Kaufman of Scantan Pennyt-vania, With his wife, the fam-er Jeanne Austin of Wikes-Borree, and his five children. Bill resides of 98 Mation Aver-ue, Wilkes-Borre.

JOHN T. TENSHAW, '60, was recently named sales rep-resentative to the Philadelphia area by Sealright Company, Inc., packagers to the dairy and food industries. In his new capacity, John will be serving the major metropolitan area of Philadelphia.

WAITE A. PLACEX, *01, has been averated a \$7,000,000 the major metropolina norse of National Science Foundation physics at Pennsylvania State university, The grant cover the callege yeer 1954-1955, In addition, Wall has received their children, son John and o 1964 Summer Institute Grant from NSF to study physics and their children, son John and o 1964 Summer Institute Grant their children, son John and o 1964 Summer Institute Grant methematics at Celby Cellege, waterville, Naine,

Walt is presently teaching phys-ics at Kingston High School. He and his wife Barbara, daughter Allison, and son David, reside at 211 Penn Avenue, Dupont, Pennsylvania, The Placeks plan to move the University Park in to move to University Park in late August

Rev. Benson received his theo-logical degree from Drew Univ-ersity Theological Seminary in 1955.

In July of this year Bob will re-port to Lachikawa Air Force Base, Tokyo, Japan, for a three year tour.

DONALD JONES, '62, the award reads:

NO MATTER what richness of materials man may employ, no matter what sources of energy he may tame to modify them for his purposes, man still needs to use men in order to carry out may of his plans and programs.

Not all. The poet may still create alone. The sciented may still, not often, produce new concepts in a closer The artist may have visions and transfer them to cause in essential solitude. But the great structures and the masses of manufactured goods which freed, clothe, house transport, amuse, and arm a modern civilization are produced only when men command men.

The history of the relationship by which this has been accomplished is a seamy one. The slaves on which all the old civilization depended were usually treated worse than the cattle they tended. Under the feudel system they were given new names but treated as badly. The coming of the industrial revolution, with its mill towns children ing to the limit of their strength, men and women held in a bondage as secure as though chained because they could not move or plan together, did not introduce mans cruelty to man; it merely made it more evident,

We live in a different sort of world. Not even where Poverty still continues over much of the earth, with man in bondage to his elementary needs, and it will so continue unless and until man learns to restric his numbers. Poverty still exists in this country, and will so continue until we solve the problem of utilizing the work of the unskilled and the unteachable in an economy where machines call only for skill. This country has a higher standard of living by far than has ever before been witnessed in the long struggle for living space and secu-rity, higher by far than elsewhere today. And, in spite of absurdities, skulduggery, ignorance, and sloth, this coun-try will maintain its security and ndvance its material prosperity. With this comes a whole new set of relation ships by which men control men, by which gradually men learn to work together for common purposes, without servility, with freedom and opportunity unencumbered by class distinctions, but with discipline, essential organization, and not inconsistent with liberty in its highest sense.

It is hence incumbent upon those who operate with responsibility in the new system to learn and understand new interrelationships between men, to encompass in their culture a deeper concept of leadership.

IT IS OFTEN SAID that this is the age of applied sci-11 IS UFTEN SAID that this is the age of applied se-ence. The exponential burst of research, halbowing the striking examples brought out by the war, pervades ou governmental programs, our universities, and our in dustry. An accumulated treasure of basic scence gathered by many years of patient work by scholars, refined and ex-lended by thousands of treakers, after unpangeraided, unids of workers, often unappreciated, un-

known to a public interested in more readily grasped trivialities, is ripe for exploitation. We have seen physics, hold over a century, suddenly flower in the ramifications of electronics, in the energy of the riven atom. Chem-itry, long a dull subject, in its complexity, now gives us infry, long the smarkle and that we aligned the etry, long a dult subject, in its complexity, now gives us materials that sparkle and that are pliant to our wiekes. Biology is just coming to its great days. True, the ad-ances in medicine, dependent upon chemistry and biol-ory, have been notable. In fact, they have caused some complexity dependent upon and longer to the second source of the second source and longer to the second source of the second s egy, have been been and the set of the set o longer, healthier, and saner. Tee the great days of biology file ahead. A dam is about to break; a dam behind which is a story of magnificent and towering understanding of life. From this will come advances such as the world has not yet seen.

Certainly it is an age of applied science. But it is also an age in which man's relationships with his fellows are undergoing a transformation as fundamental, as essential to our safety and prosperity, as that of material affairs more so, for upon a successful and salutary evolution of more so, for upon a sing men, upon the advent of better of use, of transforming use into collaboration, depend the permanence and vitality of the free enterprise sector which has made us great. It must be a bulwark mainst retrogression and choos as the complexity of life aunte

HERE IS A FALLACY ABROAD to the effect that are two forms of culture, one based on science and other on the humanities, and that these are separate bound to diverge. There are, indeed, two forms of are, but no such distinction and separation as this. should ever separate in this way we would surely me inept at tackling our real problems.

ther let us consider two cultures on a more reasonable The first form we may define on a pragmatic It is the culture which is useful in dealing with the its of the practical world. It is, more explicitly, that wedge and understanding which are the basis of wisdom in the conduct of our daily lives and in our influa upon the course of great events. It is this form of culture which I here treat. Beyond it lies a second form of culture which is not utilitarian. I will not forget this second form and will return to it.

Culture in this practical sense consists of a knowledge of men. The first encompasses all of science, and all the empirical day-to-day understanding of materials, methods of using the of using them, and the employment of power. By no means all of our knowledge of things has yet been for-mulated in scientific terms. This whole field is becoming broadened and deepened as we learn more about the things we use, and about the way in which we ourselves and all living things are constituted.

page 35

page 34

The record mounts, the structure of our knowledge of things in our journals and hitraries, until it threatens to become unmanageable. A million men laber to build it, and a single man confronted with the resulting edifice is appalled. Science becomes framented into a hundred disciplines and the practitioners in some of these speak a jargon unitedlighte to thir meighbors. At one end of the spectram lies nuclear physics, theroughly confused by dornes of elementary particles, employing bizzre-mathematics, abandoning causality, acknowledging the limits set by indeterminism, realizing that even its logic is now assailable, confronted by mysterics which seem to lie within its realm, that which nexetthees are incom-probensible. At the other end of the spectrum lie subjects ittle formaticed as yet in the generalities and working studied, and even the basic definitions, the premises on which logic would rest, are vague and ephemeral. Our pursuit of the knowledge of things has the use to a poin-subtrich near mathy more new things and now relations out here are mathy more new things and now relations and his short life can possibly grap.

The second phase of pragmatic culture, the knowledge of men, is also blossoming, though not yet in the spectocular manner of the knowledge of things. That it will thus blossom is inevitable as man learns better to understand himself and his fellows

AT THE ROOTS of both phases of pragmatic culture lie AT THE ROOTS of both phases of pragmatic culture lie classical tubjects. Behind all the present wild expansion of knowledge of things, classical physics, mathematics, chemistry, biology still hold their essential place and must be grasped before those who aspire to extend and create in specialized areas can safely soar off the ground.

Similarly, in the knowledge of men the classic study of the past still holds its traditional power. History, biog-raphy, literature are still basic. The study of ways in which men have for some thousands of years met their personal problems and the relations with their fellows, their successes and foilures, their abertations and their difficult in the state of the state still forces the hold relations. Similarly, in the knowledge of men the classic study of motivations and their blind surges, still forms the basis on which we can contend with the problems of the present day. It is well that in so doing we recognize that the environment under which men act has altered radically, environment under which men act has altered radically, for history can mislead unless thus qualified. We can assert also that history which ignores all these who did not live on the shores of the Mediterranean is not sound history. The life and motivations of Atexander are net more revealing than those of Genghis Khan, and the management of a far-flung empire by the latter was ce-tainly more effective. The myths of the forests of Ge-many invasion a childrawhy of mutic relations on the tainy more effective. The myting of the forests of Gef-many, imaging a philosophy of man's relations on this earth, are far less penetrating. far less evilized if you will, than the quiet ponderings of Chuang-tzu. Classic study in the humanities is basic to an understanding of

MAN'S USE OF MEN

by Vannerur Bush

Corporation has b thcmobil and

He received his B.S. and M.S. degrees from Tulta College in 1913 and u.D. Eng. degrees in 1916 from Hernerd University and M.I.T. under a joint arrangement then existing between the two Institutions.

In 1938 Dr. Bush left M.I.T. to become previous of the Carbonic Institution in Washington, D.C., one of the Utstanding American scientific seconds cognosations. Hit coministration was marked by increasing effectiveness in research through coordination with other Institutions.

Dr. Bush was a central figure in the development of clear fission, culminating in the utilization of atomic bombs to bring the war to an end. nucleat fission, cul

bombs to Dring the war to an end. Dr. Bush is the author of Operational Circuit Analysis (1952) and many stechnical oritics, and the co-author with William Henry Timbie, of Principles, and its fourth edition. A collection of his poperate addresses was issued in 1946 under the Fand B. Alexetti. Dr. Bushs macards by the late Frank B. Alexetti. Dr. Bushs macards by the late Frank B. Alexetti. Dr. Bushs macards by the late frank B. Alexetti. Dr. Bushs macards by the late frank B. Alexetti. Dr. Bushs macards the preserving discussion of the role of sectors: in preserving democratic institutions.

A LA ROAD OF CREATING THE CASE OF STREET

The Technology Review, Reprinted by permission Copyright, 1963. men in the intricate relations that now obtain, but classic study can itself be narrow.

dust as basic science leads to intermediate disciplines geology, meteorology, thermodynamics, acendynamics, and so on - ao the study of man progresses to economicpalitical science, psychology, sociology, labor relations, and a host of other subjects. Here, too, there is expension and ramification, and there is a slow refinement. In particular the handling of data, the statistics at the basis of many of these branches, is being rendered far more reliable and receiling. Just in the knowledge of thingshowever, the scope of explicit knowledge of thingshowever, the scope of explicit knowledge of then an individual confronted with its extent and complexity is appalled and often discoursed.

BY NO MEANS all of culture is acquired by fo udy and the readings of books. The youngster of today does not have to be taught how to diagnose a misfunction in an automobile. One is not taught in school how to confront a hully on a street corner. We learn by all of our experience and, of this, formal study is only a part. This is particularly true of the knowledge of men. Nelson knew men; this, more than the weight of guns or skill in managing a crippled square-rigged ship, accounted for Trafalgar knowledge was acquired by dealing with men. Rooseven knew men as a result of his experience in practical pulitics, knew them perhaps better than he understood conomics, perhaps not; but it was this knowlunder odge flort encound him to the presidency at a critical time. It is possible to go about the world and learn little from exchanges with men of all sorts of background, education, and experiences. But it is also possible to learn wisdom in human relationships without ever going to college, as newss of many a leader attests. Common sense misused term, but it connotes something valuable a m ous which transcends formulas or expositions difference between men arises according to ney do or do not pay attention to their daily experiences, and this in turn depends upon whether or not they are determined to learn

Continuity of learning the imbedded habit of acquiring new knowledge, is paramount in the acquisition of culture. He who stops growing in his grasp of his enviro ment and of his fellows, when clad in medieval garments he receives a parchment testifying that he is entitled to add letters after his name - such a man may be discounted in the tumult of competitive society. Do not mile at the old man whose race is run and who still delves in his books and records; he exemplifies a determination which will cease only when he dies, and which he will not abandon because it has carried him far and gives him assurance that he still lives. Men differ in their innate capabilities, in the intricate structure of the cells of their brains, inherited from their ancestors. They also differ greatly because of the ways they were molded in their pliant youthful years. But they differ also in their ambition and their motivations, and these are by no

means merely a product of heredity and environment prima is more than an automaton, as the lieve the scalar states in the has the will to resche and have also the intense urge to herm throughout his about here of the methic of mass communication and as a lass found in all the media of mass communication and as a lass found in every human contact. If there is series intent, the nequisition of knowledge is prevential and cumulative.

Do not misunderstand me at this point. No nan emspend all of his time in conferences, serious reading an analysis, without going state. Recreation and relied as essential to continued sanity. A sense of humor is aften a shield against wearines and trustation. Any maximudoes not find his fellows amusing should, in particudoes not find his fellows amusing should, in particudoes not find his participation in the national government. A light touch will open doors that are closed to a heavy hund. I would not lessen your enjoyment of life etota as you proceed. I would merely emphasize strongly as I know how that learning is the central enterion of the cultured man. that it does not blong to youth alone, and that it creates strength and yields stitfaction as long as life lasts.

THERE IS LITTLE DOUBT that we in this country can continue to enhance our material prosperity. There is great doubt whether we can perpetuate the blessings of our democratic system, in the presence of racial prob-lems, the power of pressure groups, the apathy of the public, and failure on the part of the electorate to grasp the essence of its own welfare. I do not include t threat of communism, for I have no question that we can defend ourselves, militarily and economically, if we can keep our own house in order. There is question whether we can operate a welfare state, as we should and must, without overdoing this solutary effort and forcing our-selves into inflation or out of the competitive world market. There is question whether we can arrive in time a a statesmanship of the leaders of labor and industry sufficient to achieve a just distribution of the fruits of industry without demoralizing strife. There is question whether as a nation we can develop in peace a patriotism such as we demonstrate in war, and on this basis work for the true national welfare as a goal which submerger petty jealousies and avarice. This will depend upon whether we experience a spiritual renaissance necessarily in some formal sense, but in the sense of unselfishness and altruism, in the sense of devotion to a common and worthy cause. It will also depend upon whether we fully know and understand men, whether we fully acquire the culture which is at the basis of wisdom

What do we do, how should we operate, as the scene becomes more and more complex, as the problem of the grasp of nature and the ways of more ramifies unit it is utterly impossible for one to be fully cultured in the unlimited sense of understanding both completely? Fortunately it is by no means necessary that this should ecur. No one man can grasp it all, but many men working together can grasp a sufficient range to operate grast projects. The professions differ in their emphasis. The scientist places his man thought on things, on the scientist places his man thought on things, the scientist places his man thought on things, the strategiest places his many thought on things, the science elsewhere. The lawser deals many the science of the s laws of nature as far as formulated and on working hy-potieses elsewhere. The lawyer deals primary with the relations of men, one to another and in their industrial organizations, with government, and in government. Nei-ther can afford to ignore totally the other phase of culture, there and interest in the second second second second the second sec science in an economic manner to the needs and de of men, knowing enough about science to do so with skill of men, knowing crough about science to do so with skill and effectiveness and enough about men to work with them in a myriad of ways. Businessmen usually put their them in a myriau or ways. Ensurement usually put their emphasis on men hut are seriously handicapped in these technical days if that is all they know. All professional men are confronted with the dilemma that there is much too much they need to know and too little time in which to learn it. One of the primary features of a knowledge of men is an understanding of how men of diverse tale or men is an anecessionally or new new or or averse talents may host pool their knowledge in a common effort. The doctor, the architect, or the chemist cannot possibly know all ne needs to know for his professional work. He hence needs to know how he can find out. More important, he needs to be able - genuinely, honestly, generously collatorate with those who know more than he on diverse spects of problems as they arise. The leader of a business possibly fully understand finance, labor relations ting, marketing, production, trends in industry, the if no is able, gather about him a group that does thus and: the measure of his ability is largely his skil in doing so. It is well, it is even necessary, that he excel "Ily in some field in order that he may have the of his associates. But he can be wise, in all the d ways in which he needs to be wise, only if he and has the loyalty of an able crew. This, in my rests primarily upon whether or not he has their as fully at neart as his own, or those of his This should call for no soft approach, although times does. It calls rather for a deep knowledge of men, their aspirations, their strengths and weaknesses, their ethical convictions, their philosophy of life. It calls also for a genuine liking of his fellow men.

No sected y can function well without privilege. No nation can long endure unless those who are privileged also assume responsibility and are devoted to the nation's welfare. The privileges of birth have faded; the privileges d wealth are taking new forms. Those who are privileged today are those who have had full opportunity to learn, who have been enabled to acquire culture. They are still few among the great mass of the people and it is their dury to lead. They are found in the professions, and they are found in business, for management of business is now a profession. The touchstone of a true profession is ministry to the people, exercised with pride, insistent upon the authority which true scholarship should command. The professions are burdened by charlatans, by hyporities, by stuffed shirts; I do not speak of these. I

speak rather of that small company of those who lead, who guide their fellows over rough places, who determise the centre of all our affairs, by reason of their superior knowledge and their ability to use it wisely. These are the men of culture in its modern and its salutary sense. It is they who, by reason of their knowledge of things and of men, by reason of windom based thereon, are building the world in which our children may lead happy lives.

AS WE VIEW the vast range of science and the humanfiles, as we watch them grose at a breakneek pace, as we contemplate the traitily of our intellect in trying to graze ji all, there is a development today which may come to our rescue. It may not come in time to significantly lighten the burden of the generation here represented. In the long run it will transform the lives and the thoughts of men.

Some generations ago there began the industrial revolution. Men learned to harness power to supplement their muscles. We have seen this expand, as science has become broadly applied, until it has transformed our production, transportation, communication, until it has servecome diseases and promised relief from mental abnormality, until it has shown its ability to banish poverty, and to guard men from the rowges of nature. It has rendered war absurd even though it has made it terrible and not impossible. It can remove the evils which have caused wars in the past if we allow it to do so. It can render this earth a pleasant place on which to live.

We are at the beginning of a new revolution. Mon is today building machines that think that can thus aid him to manage the complexity which he has created. So far these are simple machines - complicated, but not complex. They aid him in his buinnest computations, handle for him great masses of data, and solve his matterian far him great masses of data, and solve his matterian far him great masses of data, and solve his matterian far him great masses of data, and solve his matterian far by the solution of the solution of the solution for him great masses of data, and solve his matterian far by the solution of the solution of the solution is a solution of the solution of the solution of the problems. Buy the data better. They can learn from their own experience. They can communicate with one another. Their memories are still limited but are growing, and their memories are still limited but are growing, and their memories are still limited but are growing, and their memories are still at the solutions involved, or the astrusteness and catent of the mathematics necessary, or the sublety of the conomic interrelations involved. They are still aways be mains slaves, for a man can dow ithout a machine but a machine cannot do without a man. In their full maturity they will existend the has extended his manual strength and desterity. They will enable man to understand things, and to understand men, in ways and to an extent impossible without them. They have not by a trivici they have just begun to function. They are not limited in their talents; in maturity they will be limited only by the fact that they are not men. They may arrive in time to prevent us from be-

page 37

page 36

coming so immersed in complexity that we lose sight of coming so immersed in complexity that we lose signt of simple and homely truths, that we lose the wisdom with-out which this civilization of ours cannot endure.

I HAVE DISCUSSED the culture which is the basis of 1 HAVE DISCUSSED in curiate which is the tasks of wisdom: wisdom in the practical affairs of men. If 1 stop here you will know that 1 have omitted something subtle and precious. I do not intend to stop here.

Before I conclude, let me first speak of the rewards of culture as we have thus far treated it. The rewards are great but they do not come to every man who deserves them. Many a wise man is struck down by ill-health and ill-luck in the midst of a career. Many a one, also, abandons a bright trail because of obligations to those he guards. But even to all these there is a satisfaction if they have labored well. The rewards are changing, they here have needed, and they are often misunderstood. Holmes said, "The reward of the general is not a larger tent, but command." The true reward is not even command; it transcends command. Many a man who has attained great power, by affluence or position, is not a happy man. Many a humble man is happy indeed. Satis-faction, happiness in accomplishment, does not arrive merely because a man secures public acclaim. Some of the most unhappy, the most discontented people in the world circulate about Hollywood. Joy comes to the man of great responsibility only if he uses his power for worthwhile ends, and if he is judged to do so by his peers, by those of his associates and friends who in his opinion are entitled to judge him. The creator of a genetic code does intreap his reward because he has his name in headlines; he secures it if he is respected and admired by his colleagues. The physician does not have his reward in a fine office and an affluent practice; he finds it in the smile of a child he has rescued from misery. I know that, for every one who agrees with this summary, there are many who disagree, who plunge blindly on without attempting to evaluate their goals. Men plunge wildly because they do not stop to think where they are going, or what they seek. The primal instincts of self-preservation, of repro-duction, are powerful, and they motivate most of the

population to the exclusion of all else. But i am net talking about the mass; I am speaking of those who have culture in the sense in which I have thus for used it. These, few in numbers, by their thoughts and net a day mining the course of all their fellows, do plan their Was and they do evaluate the rewards of aurons. To the mining the course of all snerr renows, do plan their live, and they do evaluate the rewards of success. To them, above material success as valued by the world, chard, something more sucred: the realization of labor well draw and the acclaim of the friends they lave. None of us above can save the world or save democracy. All of us that have a life still to lead can live lives of true satisfaction are know the joy of living.

STILL I am not done. There is a culture beyond the progmatic culture we have thus far discussed. It is not utilitarian, it is often misrepresented, it is indefinable and it is essential to a full life. It can never be taught, although it can be exemplified. Often a technique an be taught which will enhance its strength, but the technique is not a part of the culture itself. This higher culture if often mistiken for its artificial vehicution. often mistaken for its artificial substitute: the passaord to the halls of the elect, the shibboleth which has heid together a governing class, sometimes the only bulwark against chaos among an immature people. To know Greek history in detail is not culture; to enjoy a striking Greek instory in detail is not culture; to enjoy a striking passage in Homer is. O. Henry worte; "No man has lived who has not known poverty, love, and war." He left much out. No man has lived who has not stood entimored at the song of the thrush in a valley on a quiet evening, or who has not pondered at the honking of a flock of greese high over a frantic city in the still of night. No man has fully lived who has not rejoiced at the vigor of a spirited horse or the rage of a stormy sea. No man has lived who has not, in the quiet of his study, pondered on why he is here on this earth, why he is conscious that he exists, and what is his duty and his mission.

There are indeed two kinds of culture. One can support the wisdom which will enable man to prosper and to live in peace with his fellows. The other can render life an this earth worth living.

the Professional Bookmen's Association. Bill graduated from Bucknell University where he was a member of Sigma Phi Epsion fraternity. JERRY JEAN BAIRD MISS NORTHEASTERN PENNSYLVANIA

by William A. Zdancewicz, '58

Ball Barran and a star

It all happened on the stage of Irem Temple last May 16. She wore Number 1 ... scored high-est in Talent and walked away with that treasured Award . . . and by virtue of superb poise, charm. personality, beauty of face and figure, all coupled with abundance in talent . . . she won the coveted title of "Miss Northeastern Pennsylvania." Needless to say the young lady was very

proud . . . and so too were we, for she attends Wilkes College . . . namely, MISS JERRY JEAN BAIRD

Jerry, as she is known by her many lriends, is a Junior student at Wilkes working toward a backelor of science degree in Business Administration in Economics.

The Pageant in which Jerry earned this Title was a Miss America Preliminary Contest, winner of which enters the "Miss Pennsylvania Pageant"... in this case, Jerry Jean, The "Miss Northeastern Pennsylvania" Pageant was co-sponsored by the Junior Chambers of Commerce of Greater Wilkes-Barre and Greater Pittston.

Earlier we mentioned Jerry won the Talent Award at the Pageant . . . which was earned through her inspiring and moving dramatic reading of the death sentence scene from Maxwell Anderson's "Mary, Queen of Scots." Adding further authenticity to her presentation, she wore the appropriate gown secured through Cue and Curtain

Jerry Jean is shown here immediately following the good news announcement where she is being crowned by Cheryl Lynne Kegley, "Miss Pennsylvania" for this year. Attending at left is the former winner of the "Miss Northeastern Pennsylvania" Crown, Karen Gerstein of Plymouth. The gown worn by Jerry Jean is her original creation.

To borrow a phrase . . . "That was the week that was," for Jerry Jean, because she was elected President of the Cheerleaders at Wilkes . . . and, she was Chairman of the Cinderella Ball, the latter having been held the night before the Pageant, which also was Dress Rehearsal . . . Best wishes, Jerry!
